SANITISERS

The World Health Organisation has recommended the use of alcohol-based hand sanitiser with an alcohol content of at least 60% as an effective method of preventing the spread of COVID-19 through contact.

FLAMMABLE SAFETY CABINETS FOR SANITISER

The high alcohol content in hand sanitisers means they are categorised as flammable solvents, so measures need to be taken to reduce the risk when storing bottles of hand sanitiser. Lasec® offers a cabinet solution with 30 minutes of fire resistance, that can safely store up to 200 litres of hand sanitiser.
